ABOUT ME

MCA student with hands-on experience building working prototypes through projects and hackathons. Skilled in breaking down complex problems, developing practical solutions, and automating data-driven workflows, with a growing interest in Agentic AI and RAG.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Dart, Java, C, C++, SQL
Web / Backend: React, Next.js, Node.js, Express.js, FastAPI, REST APIs, HTML, CSS, Flutter
AI / LLMs: LLM Integration (Gemini/OpenAI APIs), Prompt Engineering, Structured Outputs (JSON/Pydantic), Embeddings, Vector Databases (ChromaDB / Pinecone), RAG Pipelines, LLM-as-a-Judge Evaluation
Databases: SQL, PostgreSQL/MySQL, Firebase/Firestore, MongoDB, Prisma
ML / DL: NumPy, Pandas, Matplotlib/Seaborn, scikit-learn, Machine Learning (fundamentals), Neural Networks & Deep Learning (fundamentals)
GIS / Data Analysis: QGIS, Analytical Hierarchy Process (AHP), spatial & raster analysis, flood-risk mapping
Programming Concepts: OOP, Data Structures & Algorithms (fundamentals), SDLC
Tools / OS: Git, GitHub — Windows, Linux (Kali, RedHat, Ubuntu);

EXPERIENCE

Intern — PPCRC, Pune June 2024 – August 2024

- Worked on GIS-based flood-risk assessment workflows in Python and QGIS, applying AHP for multi-criteria spatial analysis.
- Processed DEM, land-use, river-network, and rainfall datasets to generate thematic flood-susceptibility maps
- Prepared technical documentation and supported GIS demonstrations during ISRO program sessions

ISRO Disaster Management Support Program (ISMP) — Volunteer, PPCRC, Pune September 2024

- Volunteered for a 7-day ISRO Disaster Management Support Program, preparing technical manuals and presentation material for participants.

PROJECTS

CareSync — Smart Healthcare Management Application MCA Major Project, 2025–Present

- Developing a healthcare management application in Dart (Flutter) with Firebase Authentication and Cloud Firestore for secure patient health-record management.
- Implemented medicine scheduling, dose/adherence tracking, BP and blood-glucose monitoring, appointments, health reports, alerts, SOS/emergency information, and family-member management.
- Built a Patient–Caregiver connection system using Firebase UID, with secure Firestore rules and a read-only caregiver dashboard for monitoring authorized patient health data.
- Extending the application with LLM/RAG-based health assistance and ML-driven health insights in Python; these intelligent features are under active development.

PrepPilot — AI-Powered Exam & Interview Preparation Platform Solo Hackathon Project

- Built a full-stack platform (React, Node.js/Express & FastAPI) with dynamic roadmap, interview simulation, and assessment modules powered by direct LLM API integrations.
- Implemented Gemini API-based dynamic question generation, parameterized by selected language, topic, and difficulty.
- Designed structured-output parsing (JSON schema) and an LLM-as-a-Judge evaluation engine to deliver instant, rubric-based feedback and scoring.

LeadGenPro — Lead Generation Automation Mini Project

- Built a Python and Pandas pipeline that automates lead generation end to end, from collecting raw business data to exporting a final Excel file.
- Cleaned and processed the collected records and removed duplicates so each business appears only once in the output.
- Automated contact email generation for each lead record, Structured the work as sequential stages: (collect → clean → deduplicate → generate contacts → export), the same extract-transform-load pattern used in data engineering

CodeAtlas — AI-Powered Repository Intelligence Platform Solo Hackathon Project

- Built an AI repository intelligence platform with TypeScript/React and FastAPI, utilizing static code analysis (AST parsing) and dependency mapping to trace feature impacts and regressions.
- Implemented static dependency mapping to visualize repository architecture and generate evidence-backed insights for codebases.

FRZIT — Flood Risk Zone Identification Tool BCA Final-Year Project

- Built a GIS flood-risk assessment tool in Python and QGIS, applying AHP to combine DEM, rainfall, land-use, and river-network data with slope, proximity, and interpolation analysis to identify flood-prone zones.

EDUCATION

Degree	Institution	Duration	Score
MCA — Information Technology	Vivekanand Education Society, Chembur	2025 – Present	8.5/10 (Sem I-II)
BCA	IBSAR, Belapur CBD	2022 – 2025	76.87%
HSC	H.R. College, Mumbai	2021 – 2022	80.83%
SSC	Jhulelal Trust School, Ulhasnagar	2019 – 2020	79.20%
